

SEEKING THE OPTIMAL CORPORATE PARTNER

Medscribe

BY HADLOCK HOLDINGS LLC

A proprietary, patent-pending application designed to help patients and caregivers navigate complex medical care for themselves and their families.

PROPRIETARY • PATENT PENDING • WORKING PRODUCT

Caregivers must reconstruct care across visits, changes, and handoffs.

63 million family caregivers

Nearly one in four U.S. adults provides ongoing care for someone with a complex condition or disability.

Plans change between encounters

Medications, schedules, and follow-up must remain current as care evolves.

Visit information is scattered

Instructions, next steps, and documents are distributed across portals, paperwork, and conversations.

Handoffs lose critical context

Families need a current record they can share across caregivers and care settings.

WHY MEDSCRIBE?

Medscribe connects visits, changes, and handoffs.

Medscribe gives patients and caregivers one current place to capture what happened, maintain what changed, and share what matters next.

Capture what happened. Maintain what changed. Share what matters next.

Medscribe

ONE PATIENT-CONTROLLED EXPERIENCE

Captures visits, instructions, and documents
Maintains medications, schedules, and follow-up
Coordinates caregivers and emergency handoffs

Medscribe makes complex care easier to manage.

CAPTURE
Visits, summaries
and documents

MANAGE
Medications, schedules
and follow-up

COORDINATE
Caregivers and
emergency handoff

My grandfather's care exposed the cost of missing context.

That experience led me to build Medscribe: a current record any caregiver can hand over immediately.

The right corporate partner can bring Medscribe to market at scale.

Medscribe contributes

A working product, patent-pending IP, and continued product development.

The partner contributes

Brand, operating capabilities, market reach, and distribution.

A partner-branded offering

Medscribe will be presented under the partner's brand as a patient and caregiver experience.

Flexible commercial structure

The final structure can reflect strategic fit, contributions, risk, and long-term value.

NEXT STEP

If there is interest, a focused working session can test the opportunity.

Evaluate product fit and a potential joint venture.

01

Product + IP

Live demo, current capabilities, architecture, and patent strategy.

02

Strategic fit

Priority patient needs, strategic use cases, and partner contributions.

03

Commercial structure

Discuss a potential joint venture and the structure best suited to the opportunity.
